 University of Hamburg

Motivation

- Apply the theory and models learned in the robotics course to real robot systems.
- Gain experience in working with physical sensors, actuators and robot programming.
- First step towards creating useful robot systems for non-industrial applications.

T+I+M+S Dr. ZHANG, Houxiang hzhang@informatik.uni-hamburg.de

U+H
 Technical Aspects of Multimodal System
 Dept. Informatics, Faculty of Mathematics, Informatics and Natural Sciences
 University of Hamburg

Motivation

- In this practical course, the students will work with educational robots and modular robots to learn the following aspects:
 - Building educational robots;
 - Integrating sensors;
 - Programming elementary robot skills and behaviors;
 - Testing the possibilities of cooperation;
 - Building modular mobile robots and simple kinematic chains;
 - Testing inspired behaviors.

Robotics technology

- What is a robot?
- Why should you know something on robots?

– A robot is a mechanical or virtual, artificial agent. It is usually an electromechanical system, which, by its appearance or movements, conveys a sense that it has intent or agency of its own. The word robot can refer to both physical robots and virtual software agents, but the latter are usually referred to as bots to differentiate.[1]

[1] Telecom glossary "bot". Alliance for Telecommunications Solutions (2001-02-28). Retrieved on 2007-09-05.

Robot means what?

ROBOTS

Webster Dictionary
 An automatic apparatus or device that performs functions ordinarily ascribed to humans or operates with what appears to be almost human intelligence.

Robot Institute of America
 A reprogrammable multifunctional manipulator designed to move material, parts, tools or specialized devices through variable programmed motions for the performance of a variety of tasks.

Japanese Industrial Robot Association (JIRA)
 A device with degrees of freedom that can be controlled.

International Federation of Robotics (IFR)
 An automatically controlled, reprogrammable multipurpose manipulator programmable in three or more axes.

Difference between a machine and a robot

- My definition of "robot":
 - A robot is an artificial, intelligent, autonomous system with a physical electro-mechanical platform.
 - It is a combined device with enough perception, manipulation capability or mobility to implement typical tasks.
 - Its purpose is to release human beings of laborious tasks, and of working in a critical environment, or to provide services to improve our living standard.

What we require of you

- At the beginning of every lesson, the lecturer will give an introduction. Then the students will work in groups of around three persons.
- The group will complete a list of given tasks one by one.
- At the end of section, every group should present the results of their work together. A short working report is required and can be written together.
- You should attend the course regularly. Low attendance or absence will affect your grade.
- German or English is available. English is encouraged

Edutainment robots –Lego

- Lego mindstorms
 - Developed in cooperation with MIT Media Lab researchers in 1998.
 - RCX
 - 3 sensory inputs and 3 motor outputs.
 - includes a display and buttons for selecting programs and viewing status of in/outputs
 - includes an IR serial port, through which it is programmed
 - Robotics Invention System (RIS) and easy-to-use GUI

Edutainment robots–Fischertechnik

- Fischertechnik (Arthur Fischer in 1965)
 - Contains a great amount of educational aspects, both with respect to programming and especially with respect to the construction of the robots.
 - Contains a central processing unit, two motors, six switches, two light sensors and one light source.
 - A programming interface for the Fischertechnik robots is also quite similar to that of LEGO Mindstorms
 - A little bit expensive

Telebot system

- A new kind of education robotic system for practical courses whose object is to offer a chance to different levels of students to acquire knowledge about robotics;
- More flexible mechanical parts based on LEGO bricks and our newly designed output and input bricks;
- Embedded software hierarchy;
- Easy-to-use programming environment in Java or C language, depending on the students' standard of knowledge.

Hardware realization- controller B

- ATmega16 microprocessor.
- The sensor channels from 0 to 6 can be used as digital or analog inputs; 7 and 8 can only be used in a digital way.
- Power supply should be 8.4V-24V
- Two communication interfaces on board: RS232 and TTL
- ISP for downloading the drivers
- Motor outputs 0 and 1 can be controlled by PWM signals; 2 and 3 are only under the on-off mode.

In-System Programming (abbreviated ISP) is the ability of some programmable logic devices, microcontrollers, and other programmable electronic chips to be programmed while installed in a complete system, rather than requiring the chip to be programmed prior to installing it into the system.

Possible tasks for our practical course

- Moving along a line
- Detecting and moving around an obstacle
- Looking for an object
- Following a moving object
- Mapping the scenario
- ...

GUI

Callouts for GUI elements:

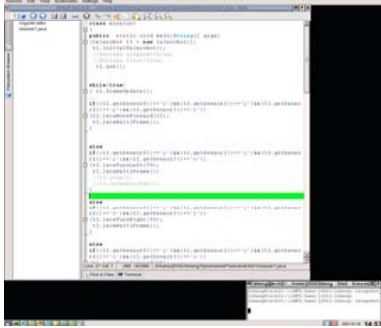

- PWM1 label: show the PWM rotate direction
- PWM1 duty
- Sensor field: show sensor's output
- Robot information field: show the robot status
- Relay output slider
- Movement button: control the movement of the telebot
- Speed slider: control the speed of the movement
- DC1 label: show the output status of relay dc output 1
- Analog/Digital button: change the sensor channel configuration
- Alarm label: show the alarm status
- Timer: show the system period
- Start/Cancel button
- Connect button: connect CGUI and telebot
- Disconnect button: disconnect CGUI and telebot
- PWM DC output slider

Edutainment robots- Modular robot

- Main idea: building robots composed of **modules**
- The design is focused on the module, not on a particular robot
- The different combinations of modules are called **configurations**
- Some advantages:
 - Versatility
 - Fast prototyping
 - Testing new ideas

T+I+M+S Dr. ZHANG, Houxiang hzhang@informatik.uni-hamburg.de

GZ-I system introduction

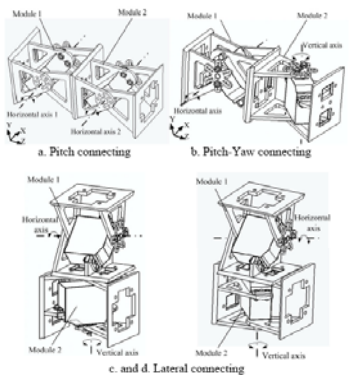

- GZ-I was developed in 2006 in cooperation with my colleague Juan González-Gómez. This system has been developed and is currently still under improvement by our consortium.
 - Low-cost mechanical design with only six parts in aluminium making up a strong module;
 - Simple robust modules assembling manually and in a quick-to-build, easy-to-handle design;
 - Four faces for interconnecting modules to implement pitching and yawing movements and two crossed connecting modes so that the system can be extended to build different kinds of inspired robots
 - Onboard controller and sensors completing the system and making sensor-servo-based active perception of the environment possible.

Lego mindstorms

- Lego Mindstorms**
 The latest product in the Mindstorms series is Mindstorms NXT, released in August 2006. The kit includes three servo motors, a touch sensor, a light sensor (now with the ability to differentiate between colors based on grayscale readings), a new sound sensor, an ultrasonic sensor and a new NXT 'Intelligent Brick'. The kit is sold for \$249 USD.

Available in GUC Library: Mario Ferrari, Giulio Ferrari, Ralph Hempel,
Building Robots With Lego Mindstorms : The Ultimate Tool for Mindstorms
 Mantac. Syngress Publishing, 1 edition, 2001.
